

## ***ColdFusion Integration Development for Telelogic***

### Highlights

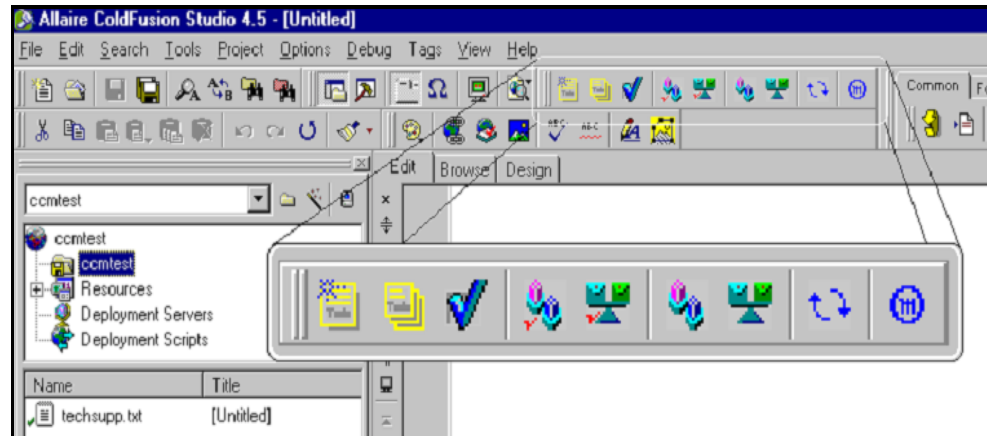

- ***CF Studio Interface to Telelogic's CMSynergy***
- ***Feature-rich Tool Bar***

### Benefits

- ***Rapid Change Management***
- ***No Need for Dual Control of Code***

### Project Owner

- ***Telelogic AB (formerly Continuous Software)***

DCSE developed an integration tool between Telelogic's task-based change management software (CMSynergy) and Allaire's ColdFusion Studio under contract with Telelogic. The integration provides a customized tool bar, which allows change control directly to CM from within ColdFusion Studio. Using ColdFusion Studio, any user can check out tasks which results in check out of files and to work on them using ColdFusion Studio. Upon completion, a task can be checked back into CM. The developer can work in ColdFusion project mode, share development code, insulate development changes and support remote development. The CM tool options that were added include Create, Select, and Check-in tasks, Reconfigure, Reconcile, Refresh and Show Messages.
